

Control of Work / Work Permitting Mobile

Effective execution of work permits is critical to minimizing inefficiencies that can occur at the shift handover. This especially holds true during turnarounds where hundreds of contractors may wait on permits and certificates to be issued each day. By moving from paper to electronic work permits, companies can also reduce the number of permit writers required.

Operational Sustainability, LLC® (OS) offers the **OESuite™ Control of Work / Work Permitting Mobile Module** to integrate work permits, efficiently organize and link work packs to your Enterprise Asset Management (EAM) solutions, identify hazards and proper controls, facilitate isolation management, enable Pre-Startup Safety Reviews (PSSRs), and identify risks to mitigate in the field.

OS's seamless integration and visualization allows compliance staff to pinpoint threats as they emerge, while making it easy to renew hundred of permits on the fly. Work permits can be integrated with operator rounds to enable comprehensive operational discipline.

Additional Benefits Include:

- Plan permits in advance
- Easy permit editing
- Copy permits to repeat jobs
- Search existing permits
- Link permits together
- Risk assess jobs to determine safety mitigations, plus ability to archive for re-use
- Capture lessons learned
- Integrate work packs with work permits
- Integrate with project planning to see the onset of project congestion to enable more effective wrench time
- View the entire work site to see what jobs are currently taking place with real-time permit monitoring conditions
- Mobilize your workforce by controlling isolation and restoration activities in the field using RFID to prevent errors and to associate locks with tags

Mobilizing Your Workforce

With the **OESuite™ Mobility platform**, it's easy to customize your own screens and workflows within our flexible framework to:

- Create email notifications and custom checklists
- Define mandatory or optional fields, text, and drop down field types
- Enable field value descriptions
- Add, remove, or re-sequence data fields and create workflows
- Supports bar coding / RFID
- Create your own security hierarchy
- Take pictures, annotate drawings
- Leverage GPS
- Enables data logging

We connect your workforce to asset, compliance, engineering, operations, automation, supply chain, and EH&S information where and when its needed. Applications include:

- Operator rounds
- Work management
- Inspection management
- Task / action item management
- Work instructions
- Condition assessment
- Work permitting
- Pre-Startup Safety Review (PSSR)
- Management of Change (MOC)
- Incident management
- Audit management
- Waste management
- Training
- Redlining

OESuite™ digital forms work across various devices
