

# Control of Work / Work Permitting

Poor organization of work permits / hot work leads to poor work execution for routine maintenance and capital projects. The **OESuite™ platform** from Operational Sustainability, LLC® (OS) electronically integrates and controls permits and certificates, identifies hazards and proper controls, conducts risk assessments, facilitates isolation management, and shares lessons learned. We even offer a visual environment, making it easy to renew hundreds of permits on the fly.

### Our solution will allow you to:

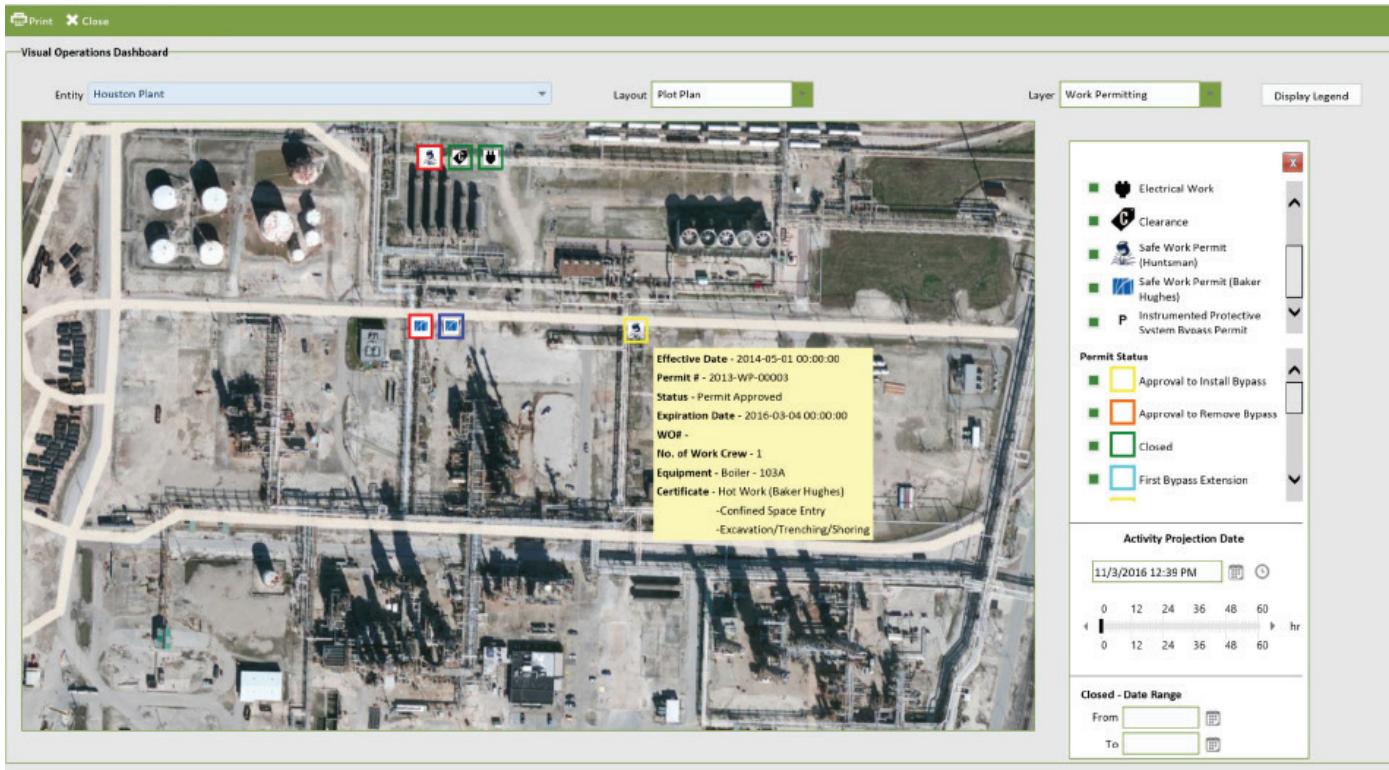

- Plan permits in advance
- Edit permits easily
- Copy permits for repeat jobs
- Search existing permits
- Request new permits
- Link permits together
- Risk assess jobs and determine safety mitigations
- Capture lessons learned
- Archive the risk assessments for re-use
- View the entire worksite to determine what other jobs are currently taking place along with real-time permit condition monitoring
- Mobilize your workforce by controlling isolation and restoration activities in the field using RFID to prevent errors and to associate locks with tags

# Control of Work / Work Permitting

OESuite™ enhances your effective wrench time, avoiding costly extended shutdowns and turnarounds, while protecting your workers by guiding them to the proper operational decision.

The OESuite™ visual environment.
