

Training Mobile

Develop, train, and retain your talent. Operational Sustainability, LLC® (OS) offers the **OESuite™ Training Mobile Module** as part of our integrated comprehensive mobility platform. Operational Sustainability, LLC uses the latest, secure technology to create and deploy apps as an extension of our core OESuite framework to enable simple point-of-acquisition data gathering and reporting from the field. No matter what device you want to deploy, online or offline, we give you the power of enterprise mobility backed up by full caching and storage. Our SaaS applications help you get started quickly with **no active deployment required**, avoiding the complexity of traditional mobile applications. Every time a user logs in, their apps are automatically up to date, making deployment to a large user base a snap. Because our apps use the same User Interface (UI) and form behaviors on every device, training is simple. Our apps run on a .NET base for better security versus native apps, and our rich Application Programming Interface (API) and library of connectors enable connectivity to strategic data sources such as data historians, lab systems, maintenance management systems, and more.

Training Mobile enables field personnel to access training records and to take training remotely – even while disconnected. Users can reach into the OS content library for a plethora of **Computer Based Training (CBT) Modules**. In addition, OS can integrate with CBT content providers via SCORM or AICC wrapper. Users can sign in via a hyperlink sent to their email to quickly gain access to close out impending assignments. Access training anytime, anywhere, on any device.

Our training solution integrates with our competency management and organizational change modules. **Training Mobile** sends you all your reminders when there are safety critical training due dates looming. Reduce your training costs, and increase organizational knowledge.

Training Mobile works both offline and online, automatically syncing necessary data whenever a user is back online. Our advanced analytics, alerts, and notifications enable rapid escalation when abnormal patterns or threats are detected, helping keep everyone informed and enhancing overall safety.

Mobilizing Your Workforce

With the **OESuite™ Mobility platform**, it's easy to customize your own screens and workflows within our flexible framework to:

- Create email notifications and custom checklists
- Define mandatory or optional fields, text, and drop down field types
- Enable field value descriptions
- Add, remove, or re-sequence data fields and create workflows
- Supports bar coding / RFID
- Create your own security hierarchy
- Take pictures, annotate drawings
- Leverage GPS
- Enables data logging

We connect your workforce to asset, compliance, engineering, operations, automation, supply chain, and EH&S information where and when its needed. Applications include:

- Operator rounds
- Work management
- Inspection management
- Task / action item management
- Work instructions
- Condition assessment
- Work permitting
- Pre-Startup Safety Review (PSSR)
- Management of Change (MOC)
- Incident management
- Audit management
- Waste management
- Training
- Redlining

OESuite™ digital forms work across various devices
